

MT4 Installation Manual

Mac Version

【MT4 Installation method for Mac Version】

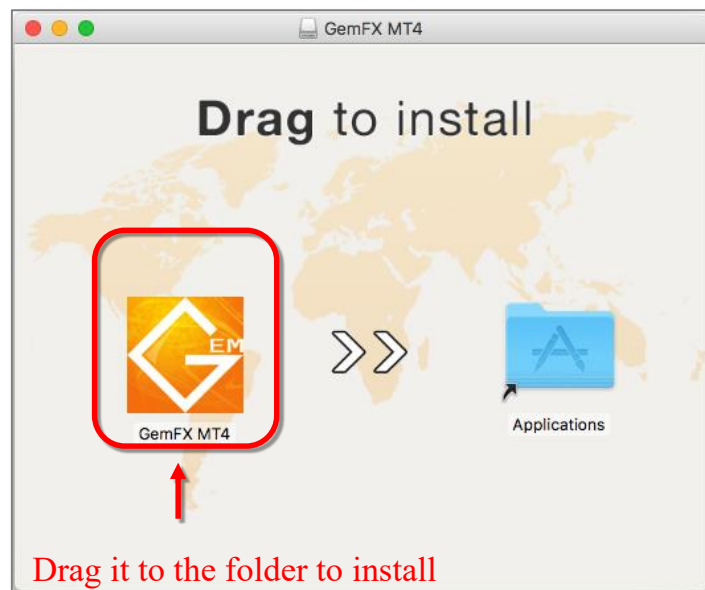

- ① Download the installer below or from the HP

<https://gemforex.com/en/platform/gem-mac-mt4.php>

- ② When the download is complete, start to run it by double clicking the installer.

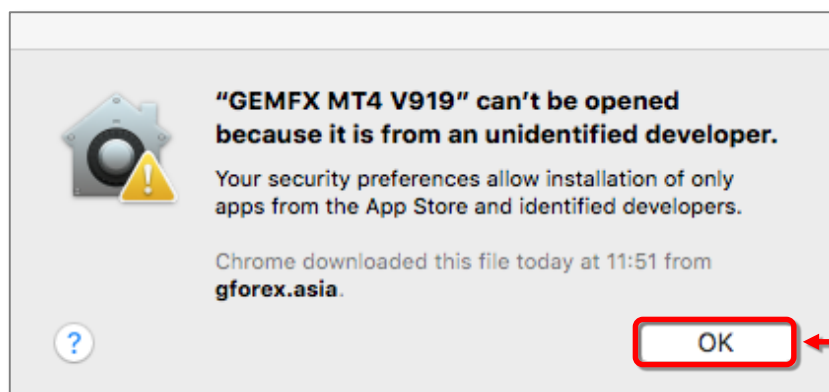

- ③ Drag the GemFX MT4 icon to the Applications folder on the right to start the installation.

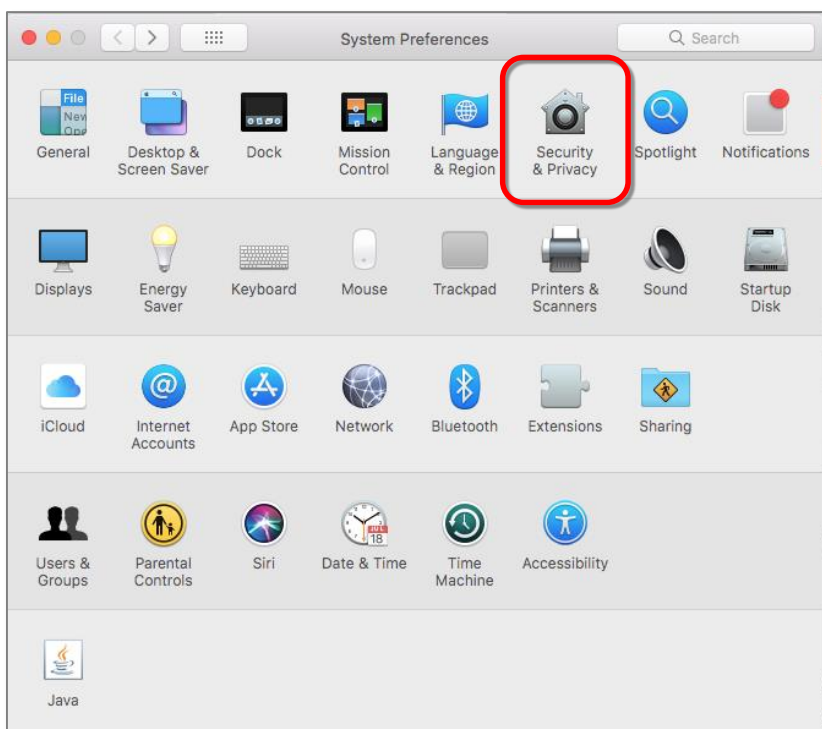

Normally, the MT4 installation has been completed for Mac

④ In some cases, the following warning will be displayed when installing MT4 for Mac

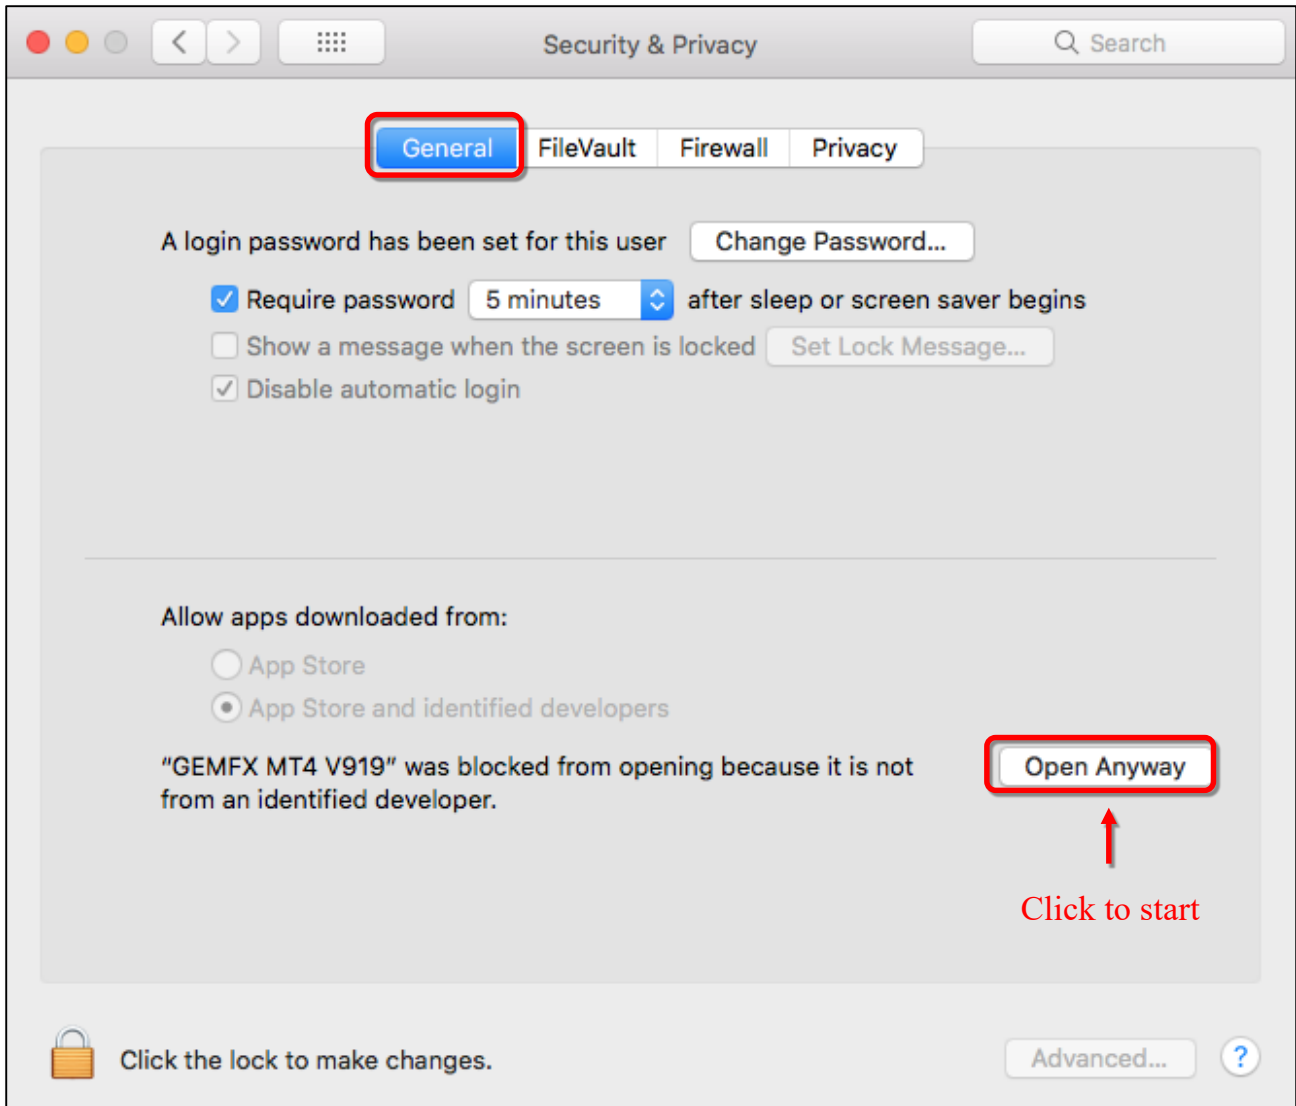

Click OK button to close

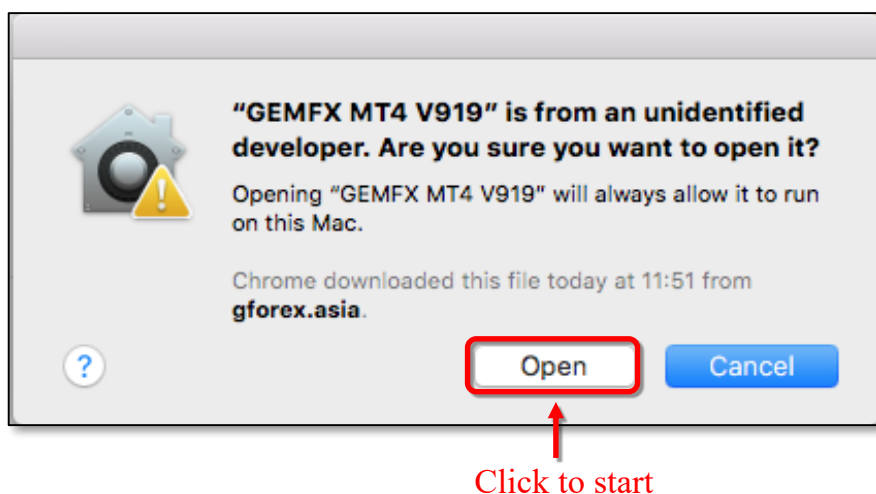

In that case,  Open **【Security & Privacy】** from **【System Preferences】** of Mac

In the **【General】** Tab of **【Security & Privacy】**
Click **【Open Anyway】** button to start MT4.

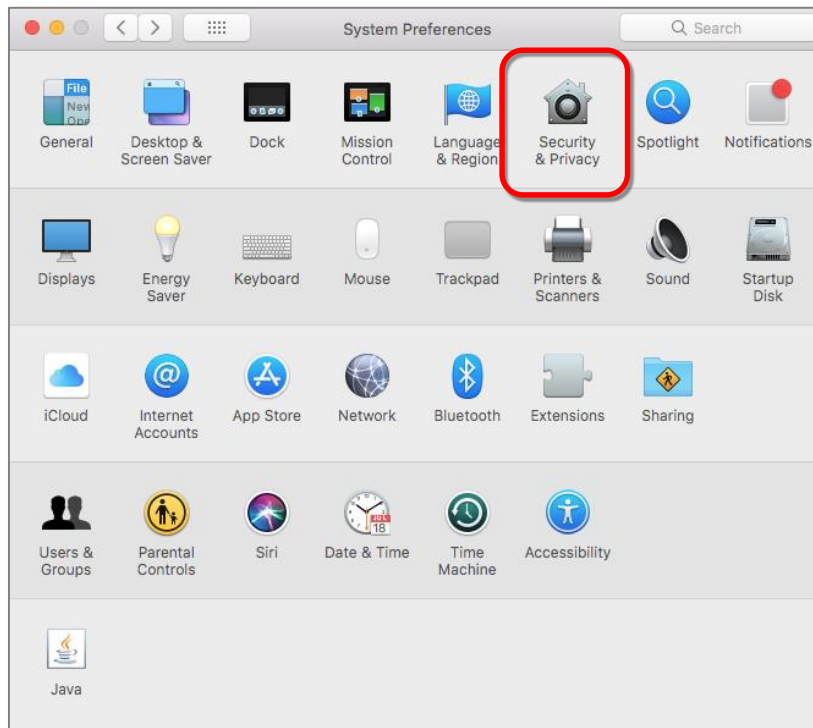

If the following message will be displayed, click [Open] button to start MT4.

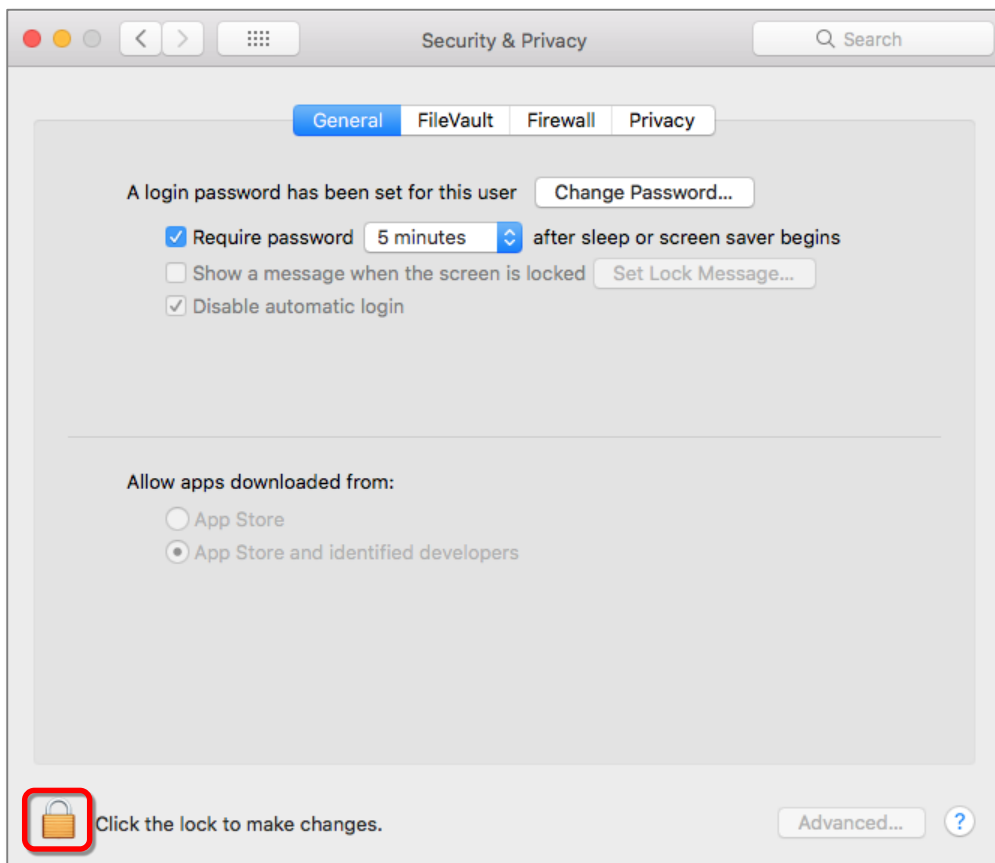

The MT4 installation has been completed for Mac,
If the installation has been not completed by the above method, please check the following pages.

【What to do if the installation fails】

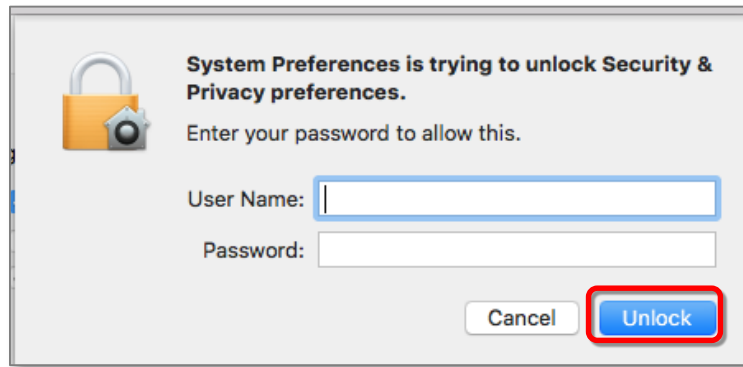

- ①  Open 【Security & Privacy】 from 【System Preferences】 of Mac

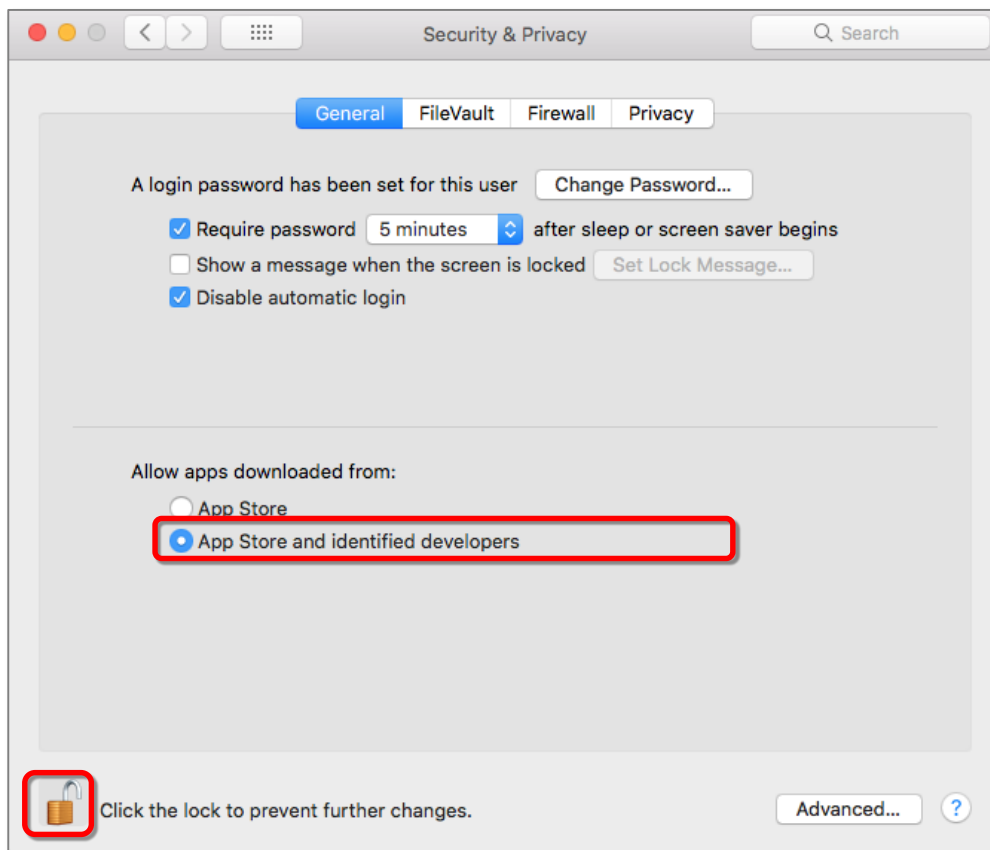

- ② In the 【General】 Tab of 【Security & Privacy】 click the 【Lock】 button

③ Enter User Name and Password of your Mac then click [Unlock] button.

④ At **【Allow apps downloaded from】**
Choose **【App Store and identified developers】**

⑤ Finally, click the **【Lock】** button again to prevent further changes.

You can try the MT4 installation again after the above settings.
